

780 million people lack access to clean water

Nearly 801,000 deaths of children under 5 years old are due to contaminated water and lack of proper sanitation availability.

That is 2,200 children a day dying from not having clean water.

On average irrigation increases crop output 2.3% higher than without it.

One Million Wells is a 501(c)(3) non-profit that uses **Patents for Humanity Award-winning technology** to teach others to drill water wells in a cost efficient manner. Like teaching a man to fish and feeding more people we teach people in these underdeveloped countries the innovative drilling technique so they can continue to make a positive impact by teaching others and drilling more wells after we are gone. Check out what One Million Wells is doing to help solve the worldwide water crisis. www.onemillionwells.org

WHERE THERE IS WATER THERE IS JOY!!

Our sub-project is raising funds to build the water neighborhood and facility for the Transform the Needy Child (TTNC) orphanage in Uganda, Africa. TTNC is making a difference working with very limited resources or shelter. We met them last year and felt called to take on this side project. It shows the full capacity of change that can be made with the soft infrastructure of a complete water neighborhood. This project will cost about \$100,000 to complete and we have raised \$31,600 so far. [Groundbreaking is planned in April 2023](#) for the state of the art, generational life-changing facility that can securely house and educate up to 72 children at a time.

You can see the excitement about their new books! Can you imagine how they will feel eating, learning, and sleeping safely in their new facility???
If you feel called to donate to our favorite organization making generational changes all over the world we would greatly appreciate it!
